Master Calibration – Manage the Basics

„Quality is expensive - lacking quality even more“. The quote of Prof. Dr. Hans-Jürgen Quadbeck-Seeger concludes the third, consecutive Munich Calibration Day down to the point. To master calibration one must form a solid foundation. Quality drives success. Thus, Munich Calibration Day 2016 headlined “Master Calibration – Manage the Basics”.

Munich Calibration Day is an esz initiative and took place at Sofitel Bayerpost in Munich, Germany on October 19 and 20, 2016. Day one was dedicated to the core basics of calibration as an introduction to the fascinating world of calibration and metrology. Leading expert speakers never lost track of leading the audience on to the way to efficient means in all-day calibration and test equipment management. Day two was a designated hands-on experience featuring esz AG’s elaborate test and measurement equipment management software calibration expert. Munich Calibration Day 2016 came to an end in an open discussion among speakers and attendees addressing Q&As and giving real life examples.

The conference proved to be a huge success and sold out quickly. Needless to say that the follow-up event “Munich Calibration Day 2017” is already under way.
