

More security for the northeast of Germany esz AG opens calibration laboratory in Berlin

esz AG calibration & metrology is expanding its network of locations with an additional calibration laboratory in the German capital. In the last few months, the previous sales location in Berlin has been elaborately expanded into a laboratory. Shorter transport routes mean that customer orders can now be processed even faster and downtimes are minimized.

The feeling of security is extremely important. Because only with regularly calibrated and precisely functioning measuring equipment can the increasing quality requirements of production companies be met. In order to meet the high demand, esz AG – one of the largest independent calibration laboratories in Europe – has opened another calibration laboratory. The new 170 square metre laboratory in the Innovationspark Wuhlheide in Berlin-Köpenick has been equipped with state-of-the-art technology for the calibration of electrical and pressure measurement variables.

Nico Lüpke (l.) and Norman Linow (r.)

In addition to on-site calibrations, laboratory manager Norman Linow also carries out calibrations directly on the customer's premises. Linow is supported by Nico Lüpke, the new sales representative of esz AG in Berlin. "The demand for accredited calibrations is still increasing", explains Bodo Seewald, Sales & Marketing Director at esz AG. "A permanent presence in Berlin brings us closer to our customers, enables us to react more quickly and continue to improve our local service quality".

But that's not all. esz's own delivery service "Logistik Expert" has also been expanded. With the new weekly service routes, the measuring instruments are transported quickly and safely to the laboratory and back to the customer. Downtimes can be planned exactly and are reduced to a maximum of three to five working days. The new routes are:

- Hamburg: Berlin, Schwerin, Lübeck, Hamburg, Hannover, Salzgitter, Wolfsburg, Magdeburg, Potsdam
- Dresden: Berlin, Cottbus, Bautzen, Dresden, Freiberg, Chemnitz, Zwickau, Gera, Leipzig, Halle.

Measuring instruments from all other areas (high frequency, optics, length, mechanics, thermodynamics, automotive testing technology) are still calibrated at the headquarters in Eichenau near Munich.
